[Come experience the world of laser no shots no drill no numb lip or tongue](#)

Laser dentistry can improve the precision of your treatment while minimizing pain and recovery time.

Laser dentistry incorporates state-of-the-art technology in various aspects of dental health practice and treatment, but the technology has yet to break into the mainstream of dentistry.

It is estimated that approximately 5% of all dentists have lasers available in their clinics today. We hold the pride to possess one of the finest lasers in the world with a specialized team of laser dentists, surgeons

[Here are some of the major benefits associated with laser dentistry:](#)

- Extreme safety and comfort
- Procedures performed using dental lasers may not require sutures
- Certain laser dentistry procedures do not require anesthesia
- Minimizes swelling and scarring
- Laser dentistry minimizes bleeding because the high-energy light beam aids in the clotting (coagulation) of exposed blood vessels, thus inhibiting blood loss
- Bacterial infections are minimized because the high-energy beam sterilizes the area being worked on
- Damage to surrounding tissue is minimized
- Wounds heal faster and tissues can be regenerated
